	SDG	Telephone Discussion Clinical Info: Was seen this morning having possibly fallen out of a window yesterday. PK sedated and could not palpate a fracture - apparently wasn't given permission to Xray - so bandaged. O phoned this afternoon as dog hasn't yet drunk anything, however has eaten some salmon that was offered. Discussed but O advises dog very difficult to examine, sounds as though just groggy post sedation. O also emailed some videos which appear to show Kimmy sitting and whimpering/whining a little. O was concerned re dyspnoea but doesn't appear to be. Offered to re-see. Failing that see how she is tomorrow once drugs wore off. Encourage drinking, add water to tasty food. Clinical Info: ** O won't answer unless number shows up so I phoned off the mobile **				
02 Jul 2018	SH	Clinical Info: IF OWNER GIVES CONSENT: email history to nurses-totnes@dartvale.co.uk				
	GMM	Clinical Info: Owner gave oral consent to PK to export history
